

I. Purpose

The Green Procurement Policy of DXI Logistics LLC incorporates environmental and social factors into DXI's purchasing decisions, contributes to the UAE's environmental goals, including the Net Zero by 2050 Strategic Initiative, and encourages DXI's suppliers to do the same.

II. What green procurement means

DXI evaluates the need for each purchase and gives priority to products and services that meet the definition of green procurement under applicable UAE law and recognised standards, including products and services with low energy consumption, low pollution, recycled content, or that are recyclable or re-usable.

III. Supplier management

DXI communicates this policy to its suppliers and prioritises green products and services. DXI gives preference to suppliers with recognised environmental certifications or credible energy-saving and carbon-reduction plans, and includes environmental criteria in supplier selection and performance evaluation.

IV. Local procurement

DXI continues to strengthen partnerships with UAE suppliers. Local sourcing improves service efficiency, shortens lead times, reduces transport distances and emissions, and supports the local economy.

V. Green procurement practices

DXI integrates environmental factors into purchasing and supplier selection, for example by:

- Replacing disposable goods with re-usable or recyclable alternatives, including packing materials.
- Preferring eco-labelled products where they are available and offer value for money.
- Considering life-cycle costs and benefits, not only the purchase price.
- Raising staff awareness of environmental issues in procurement.
- Encouraging suppliers and service providers to offer environmentally preferable options at competitive prices.

Nothing in this policy requires DXI to buy products that do not perform adequately for their intended use, or that are not available at a reasonable price and time.

VI. Environmentally friendly materials and facilities

DXI prioritises energy-efficient and eco-labelled office equipment and supplies, avoids over-packaged products, promotes re-use and recycling of materials, and reduces the use of products containing toxic or hazardous substances.

VII. Green transportation

Vehicles used in DXI's operations must comply with UAE and Dubai vehicle emissions and roadworthiness requirements. In transport planning DXI favours back-haul and consolidated loads, local sourcing, and partners able to support green logistics, to reduce emissions.

VIII. Authorisation and training

Purchases are approved in line with DXI's authority matrix. DXI promotes environmental awareness through training and evaluates its green procurement performance regularly. This policy is reviewed at least every three years, or earlier if necessary.

Approved by:

Jerry Nazzal
Group President

This policy is effective from Oct. 2026 and will be reviewed by Oct. 2027, or earlier if required by changes in UAE law or DXI operations.
